

Title : Changed electrodes (spiral)
Model : B and B HW-series (Norwegian and Marine machines)
Date : 19-11-2020

Reason for sending you this information

We want to inform you that we have changed the electrodes for the Norwegian and Marine machines.

The reason is the poor conductivity of the standard electrodes when the water hardness is very low.

To prevent this in the future, we have introduced the new electrodes with a larger surface.

We use these new electrodes in the Norwegian and marine machines with serial number 020002178448 and higher.

Part information:

Applicable for the B and B HW-series in very soft water areas.

New spare part:

B : 6.305.052.000 Spiral electrode set (coffee part)

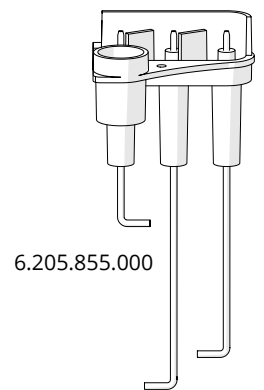

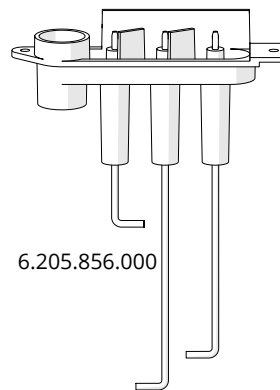

B HW : 6.305.052.000 Spiral electrode set (coffee part)

6.305.053.000 Spiral electrode set (hot water part)

Deleted spare part:

none

Standard

Norwegian and Marine
